# CSA Performer:
# Safety-Driven by the BASICs

Get a clearer snapshot of what's happening on the road and proactively manage your FMSCA compliance and safety scores in real-time, with CSA Performer.

**CSA Performer™**

## Safety in Overdrive
Never before in the transportation industry has more attention been focused on safety and compliance than now. Hours of service changes, EOBR requirements, and laws on distracted drivers are just a few of the initiatives being tasked to fleet owners and drivers with more and more regulation on the horizon.

If all this regulatory tracking has you stuck in a perpetual game of catch up and is impacting your resource allocation, and safety execution, then check out Transportation Performance Inc. and our critically acclaimed, software performance tool – CSA PERFORMER.

CSA Performer is an integrated solution designed to help carriers better manage FMSCA's improvement strategies for Compliance, Safety and Accountability on the highway.

## Risk Management Behind the Wheel
Regulatory compliance can grind your fleet to a halt before you know it making real-time monitoring to identify violations an absolute necessity. CSA Performer offers safety and fleet managers a measurement, intervention and evaluation tool to help systematically identify why safety problems are occurring in order to, provide coaching, recommend remedies and encourage corrective action(s). And with CSA's new mobile app, drivers can monitor their own CSA scores on their smart devices.

## More than Just a Scorecard
CSA performer goes beyond the typical scorecard product and can:
- Integrate your driver data with robust workflow and review processes that you can customize.
- Enable detailed actions plans for proactive behavior management of active drivers according to hierarchy.
- Furnish daily updates of FMCSA posted inspections and crashes with automated email notification sent to the appropriate parties.
- Delivers preventable accident integration along with critical roadside violations that give a complete risk profile of a driver factoring only incidents considered avoidable.
- Supply risk indicator warnings that flag drivers with crash and violation behaviors for immediate counseling.
- Analyze current and historical facts that can indicate future potential events.
